\section{Background}

-----
warning: main.tex: 98: Overfull \hbox (81.14413pt too wide) in paragraph at lines 97--98
Overfull \hbox (81.14413pt too wide) in paragraph at lines 97--98
\caption{Regions assigned for spectral analysis. \emph{Left panel:} White contours in the
left panel represent the [2, 3, 5, 7, 10] $\sigma$  detection limits in the 0.3--2.0 keV
band from Chandra/ACIS. The slit-shaped regions (1.5 arcsec wide) represent the APO/DIS
optical spectra, defined to align with the major axis of the galaxy and the major axis of
the circumnuclear disk. The circular core region, shown in the zoomed image, has a
3-arcsec radius. The RGB background image was generated using the  $gri$  observations from
Pan-STARRS. \emph{Right:} Close-up view of the core regions, showing the apertures for
optical 6dF spectra ( $R=3.4$  arcsec), and the APO/DIS slit-spectra. The background image
represents the flux intensity in the F475W band from HST/WFPC2.}
